Canterbury Boys High School

Enrichment Program

Coordinator: Mr Glenn Smith

Enrichment Program

The Enrichment Program in Years 9 and 10 explores topics such as philosophy, comparative studies, 21st Century Media, writing for the HSC and higher order mathematics and science.

Every student in our program will:

- Engage in cross-curricular learning experiences to develop a deep understanding of complex, real-world problems.
- Extend his analytical skills through research and the use of technology.
- Foster the social and emotional intelligence required for a world that is constantly being reinvented.
- Work collaboratively in team-based environments, including the design and implementation of special interest projects.

How is my son chosen?

1. Complete the attached application form.
2. Apply for your son to sit for the enrichment test (booking details are included on the application form)
After successful completion of the
3. test, students will be interviewed by the enrichment coordinator and will need to provide a supporting portfolio outlining their academic achievements.

Canterbury Boys High School offers an Enrichment Program for boys who exhibit high potential across a range of learning domains.

The Program maximises students' academic potential, by challenging the boys to think critically, fostering a sense of curiosity and a determination to question. In the Years 7 and 8 Enrichment Program, the boys investigate concepts through cross-curricular depth studies, examining issues through creative, technological, mathematical and applied science perspectives.

Boys apply their knowledge to design, develop and create, giving them opportunities for their ingenuity to flourish. These opportunities include historical dramatic productions, interior design and developing hydroponic systems.
